Bentleys

Case Study

VOLUME JOINERY PRODUCTION

What we have

In addition to a first class interior fit out service, Bentleys have manufactured specialist, hand crafted joinery for over 18 years for architects, specifiers, designers, contractors and private clients. Having recognised how our workshop facilities could be fully utilised to meet the growing demands of our clients we have recently added to our 45,000 sq ft workshop a volume production area for clients who require products in higher quantities for large or roll out projects.

An area has been created within our existing workshop to assemble products which have been cut using our state of the art machinery and developed by our technically skilled setting out team.

What we can do

We are able to machine, assemble and store in bulk items such as

- Door Sets
- Cash Desks/Counters
- Gondolas
- Units
- Carcasses

The above list is simply a taste of what we can produce in various quantities.

What the benefits are

The benefits for you are that you are able to source pre finished joinery from a single source which guarantees consistency and quality. Items are stored safely until required on site and we can react swiftly to any additional requirements.

Case Study: Manufacturing for Independent Pharmacies

One client who has enjoyed the benefits of our new facilities is a Scottish designer who specialises in the design and fit out of independent pharmacies. Our role over the past three years has been to develop and coordinate the design and production of pre-finished joinery for those chemists. Items include display units, counters, gondolas and dispensary units.

Having set up an area where we can machine, assemble and store in volume, our client can now plan months ahead, with the knowledge that we can react quickly to any additional requirements while reducing the cost of production as well as having one supplier responsible for development, quality and delivery.
